Abstract of JP2002006537

PROBLEM TO BE SOLVED: To provide an electrophotographic dry toner which will not contaminate process members, such as a developing apparatus and a photoreceptor by filming of the toner particles, which is superior in the offset resistance during fixing, superior in the durability and transparency and especially suitable as a color toner. **SOLUTION:** The electrophotographic dry toner consists of a mixture of color resin particles, comprising at least a binder resin and a coloring agent and capsule particles, having a thermoplastic resin coating layer on the surface of parting agent particles.
